## PROJECTS

**Society HomeChef** | *Full-Stack* | *React.js, Node.js, MongoDB, Socket.io, Gemini API* | [GitHub](#) | [Live Demo](#)

*Mar 2026*

- Engineered a **production-grade multi-role food delivery platform** with **JWT** role-based access control supporting chefs, customers and delivery riders with scalable full-stack architecture.
- Designed a **real-time order dispatch engine** via Socket.io and Haversine proximity algorithm for nearest-rider assignment, applied **atomic MongoDB transactions** to eliminate race conditions under concurrent load.
- Implemented a **cryptographically hashed, time-sensitive OTP verification** flow ensuring tamper-proof order handoffs and end-to-end data integrity across all user roles.
- Integrated **Gemini API** for AI-driven nutritional analysis with heuristic fallback logic, guaranteeing resilience under third-party API failures.

**SoulCare** | *Full-Stack* | *React.js, Node.js, RAG Pipeline, Supabase, WebSockets* | [GitHub](#) | [Live Demo](#)

*Nov 2025*

- Architected a **secure, scalable AI-Powered Mental Health Platform** with real-time anonymous messaging via **WebSocket** integration and end-to-end encrypted communication channels.
- Built a **Retrieval-Augmented Generation (RAG)** pipeline using ML models for context-aware wellness resources, validated through pilot testing for high-precision outputs.
- Resolved **data synchronization latency** across distributed clients by integrating **Supabase** as the backend-as-a-service layer, optimizing server response times for concurrent users.

**QuizCraft** | *Full-Stack* | *Node.js, Express.js, React.js, MongoDB* | [GitHub](#) | [Live Demo](#)

*Sep 2025*

- Developed a **full-stack assessment platform** with dynamic quiz creation, multi-format management and real-time result processing designed for **concurrent multi-user access** with minimal latency.
- Engineered **high-throughput RESTful APIs** with schema-enforced MongoDB data models and input validation, ensuring data integrity and low-latency responses under load.
- Implemented **JWT-based authentication** with protected routes, retake prevention logic and **Zustand** global state management, tracked per-user quiz history, scores and submission counts across separate creator and participant views.
